WHAT IS MULTICROSSCHAIN?

BACKGROUND INTRODUCTION

The NFT world has seen a huge leap in the last few years.

Everyone must have heard something about it.

This concept is revolutionizing the Cryptocurrency world and this is just the beginning.

Numerous marketplaces have emerged, each with its own characteristics, but most importantly, each with its own selection of blockchains.

Most of these marketplaces use a blockchain to verify their transactions.

Unfortunately, this system also has its limits. As the number of blockchains continues to increase, they can only leverage the necessary blockchain NFTs.

Finding your way around has become complicated due to the restrictions imposed by blockchains. Some artists use ETH, others use BSC or Polygon, which makes it hard for everyone to agree.

Our goal today is to offer you a marketplace without borders.

A place where vendors can choose their own blockchain and sell their work to anyone, no matter which blockchain they choose.

It is **complicated** to find your way around because of the restrictions caused by the blockchains.

Some artists use ETH, others use BSC or Polygon, making it difficult for everyone to agree.

Today, our goal is to offer you a **marketplace without borders**.

A place where sellers will be able to choose their own blockchain and **sell their works to anyone, no matter which blockchain they choose**.

COMPLEXITY

"Some artists use ETH, others use BSC or Polygon, making it difficult for everyone to agree"

META MOON NFT MARKETING PROJECT

The NFT market is huge and above all the competition is intense. There are thousands of platforms offering works of all kinds.

The key question is how to stand out from the competition.

As explained in our introduction, our marketplace will address many of the limitations found on other platforms.

First and foremost of all is how to move cryptocurrencies across all the different blockchains available in the market.

Our R&D team has developed a orientation system to instantly convert cryptocurrencies from one blockchain to another and is specially adapted for the NFT world called "MULTICROSSCHAIN".

For example, an artist who offers a piece of art and wants to sell it in ETH can do so on our platform, but what's new is that the buyer can buy it with BNB, Matic, etc.

Alternatively, it can also be paid by a client in ETH if they want to sell their work in BNB.

WHAT IS NEW?

"if they want to sell their work in BNB, they can also be paid by a client in ETH"

INTUITIVE AND USER-FRIENDLY UI

We will provide you with an intuitive and easy to use platform.

The seller will need to enter the market and upload his NFT.

They need to fill in NFT information, Title, Description and Metadata.

Once the NFT is loaded, the seller will be able to choose the currency in which their NFT will be purchased.

For example, BNB, BUSD, USDT or even ETH etc. Once the currency has been selected, they will need to set the price by bidding or at a fixed price.

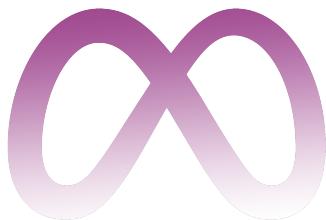

Once the tender method has been chosen, they must decide on the amount of royalties.

As for the buyer, they will be able to buy any NFT with any currency they want.

For example, it will be possible to buy a product whose price is ETH with BNB or BUSD.

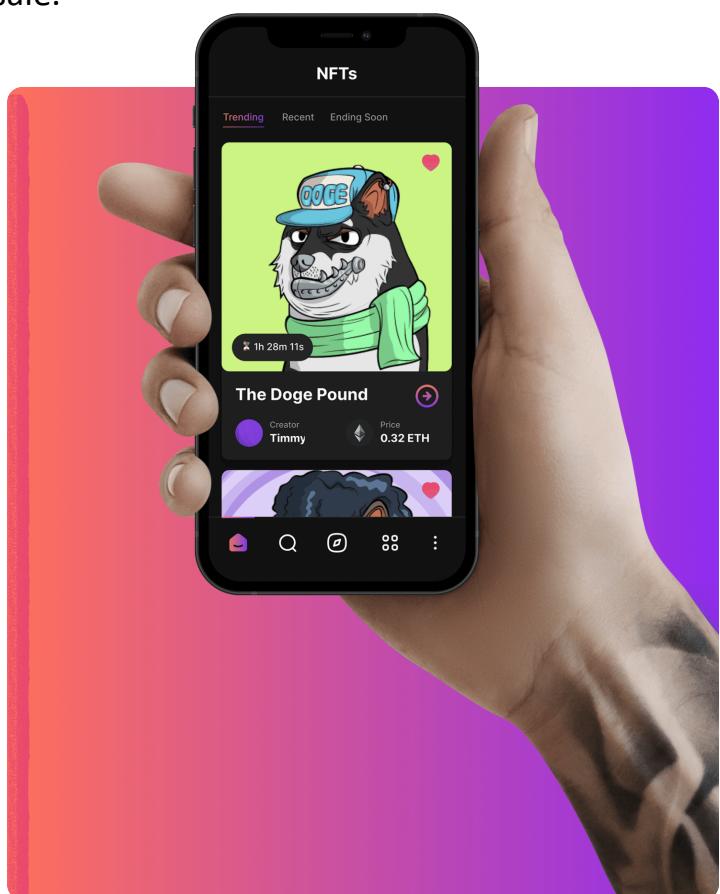

To ensure fairness regarding taxes, the fees charged in our marketplace are 1%.

Copyrights are at the discretion of the seller and they can set the amount directly on the platform at the time of sale.

FAIRNESS

"fees collected on our Marketplace are 1%"

MARKETING AND DEVELOPMENT

As explained above, the world of NFT is not only innovative but also particularly competitive.

Our MULTICROSSCHAIN system will enable trading with any blockchain and It is clear that it would be a marketing plan.

Our PR team, press articles, partnerships, influencers and even TV has devised a very important plan to become one of the most important platforms in the NFT World.

STRATEGY

"articles in the press, partnerships, influencers, and even TV."

FEES

As with all other tokens, taxes were assessed upon buying and selling. Taxes are **12% when buying** and **12% when selling**.

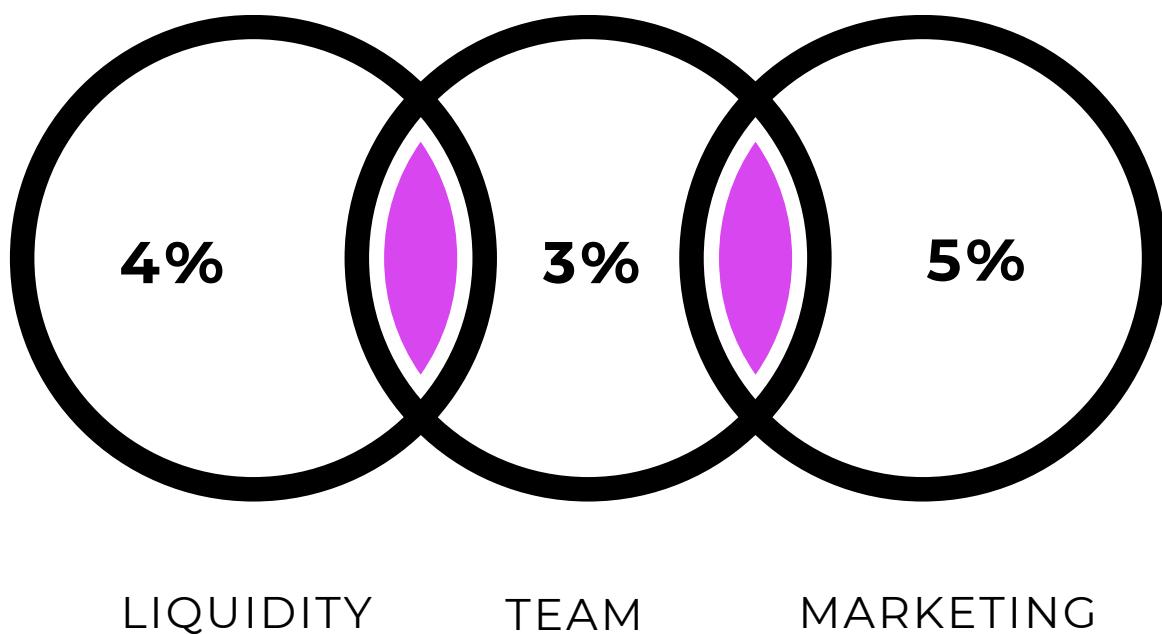

How do they divvy up?

The 12% collected from the purchase is split in two:

- 5% for Marketing Fee
- 4% for Liquidity Fee
- 3% for Team Fee

The 13% collected from the sale is also split in two:

- 5% for Marketing Fee
- 4% for Liquidity Fee
- 3% for Team Fee

TOKENOMIC

NAME: Meta Moon NFT

SYMBOL: METANFT

TYPE: BEP20

DECIMALS: 9

TOTAL SUPPLY: 100 000 000 000

MAX. SUPPLY: 100 000 000 000

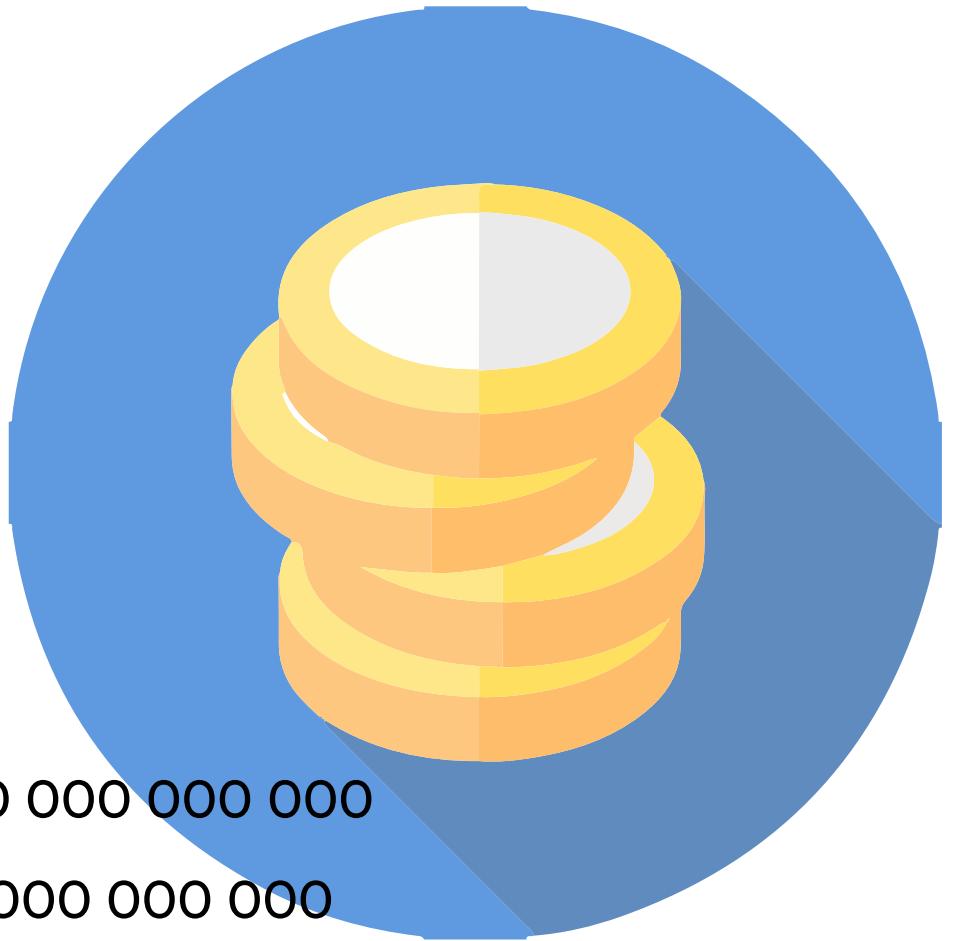

Pinksale Pre-Sale: 20%

PancakeSwap Sales: 20%

Exchanges: &10

First Coin Burn, Airdrop : 30%

Marketing: 20%

METAVERSE

Metaverse appeared a few years ago and generates enormous traffic.

Visits to these types of platforms number in the billions.

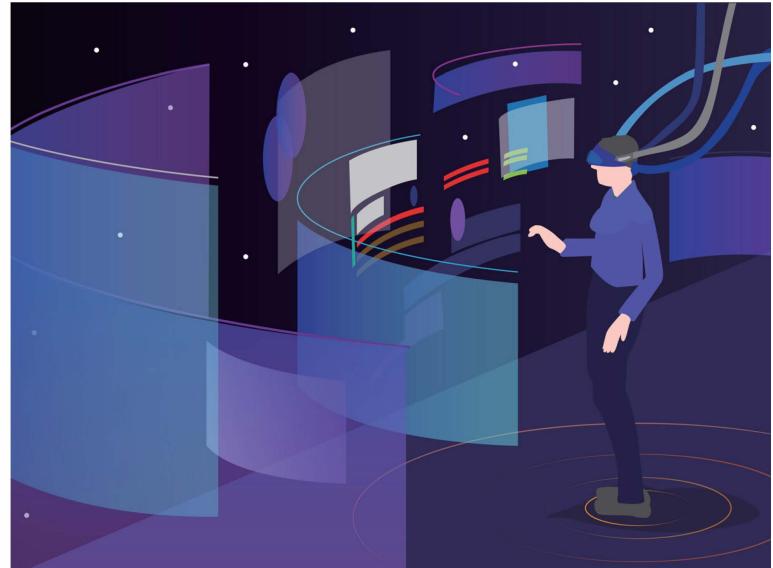

Some very large global Firms have already purchased ad space in order to take advantage of this global traffic.

Who has never dreamed of being able to admire works and enjoy them directly from home, without leaving the comfort of one's own living room, by having instant access to masterpieces in just a few clicks?

A project has been taking shape in our minds ever since we conceptualized our marketplace.

This project would be based on the simple idea of having direct access to our NFTs in VR or developing virtual museums according to the theme of the works or to their history.

It is already possible to see the Louvre, the British Museum or New York City's Museum of Modern Art, but we would like to democratize this passion in the Metaverse.

SIMPLE IDEA

"having direct access to our NFTs in VR or developing virtual museums"

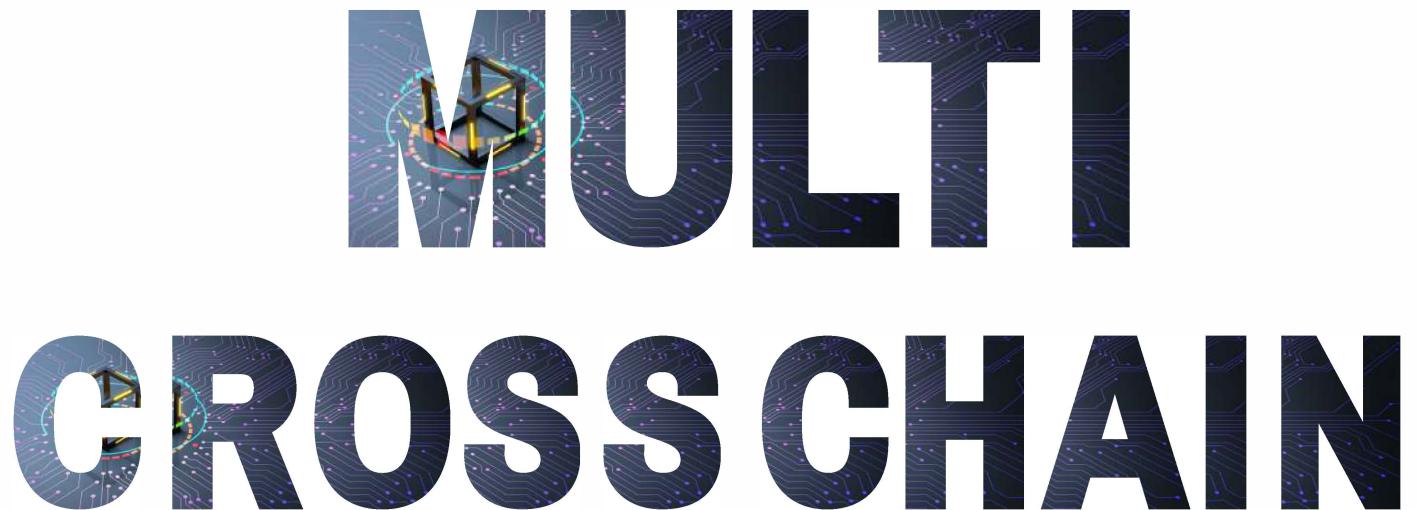

WHAT IS MULTICROSSCHAIN?

As its name suggests, multicrosschain is a **routing system** that allows Cryptocurrencies to be transferred across a variety of blockchains.

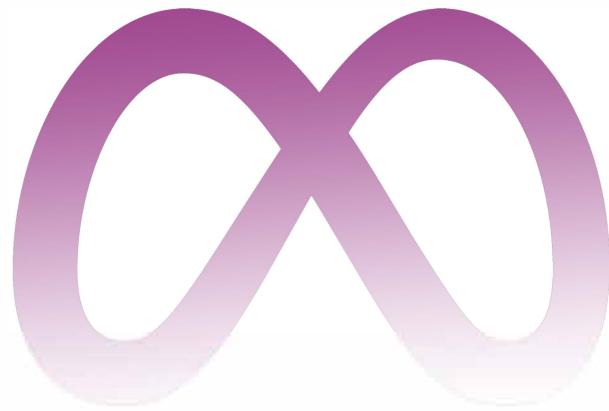

Routing systems already exist but are either **incompatible** with or poorly suited to the world of NFTs.

When Artists wish to suggest a work, they usually have to deposit it in several different Marketplaces, with **different blockchains** in order to reach the maximum number of potential buyers or fans.

Our Multicrosschain will transform this approach. From now on, when our Multicrosschain is available, Artists will **only deposit** their NFTs a single time and will have direct access to all the fans, irrespective of their method or chain of payment.
